

## Worksheet

<b>Patient initials:</b> <b>Brief clinical scenario:</b>	<b>Age:</b>	<b>Gender:</b>
<b>Population</b> What are the disease and demographic characteristics that may be important in defining a group like your patient?		
<b>Intervention, Exposure, or Prognostic factor</b> Remember to include standard interventions that may be used with the new intervention		
<b>Comparator</b> What is the alternative? Include standard interventions and placebo. May be blank for questions of prognosis.		
<b>Outcomes</b> What could this intervention affect? Include outcomes that may be important for medical decision making (eg. Efficacy outcomes), but also include outcomes important for the patient such as quality of life, toxicity, morbidity, and cost.		
<b>Final PICO question:</b>		
<b>Type of question:</b> Is it a question of diagnosis, therapy, harm, etc?		
<b>Best study type:</b> What is the ideal study design to answer your question?
